Introduction

Welcome to R-Wave ERP, your ultimate solution for optimizing business operations. This guide will provide you with detailed insights into the various integration methods available for R-Wave ERP, highlighting the benefits that make R-Wave ERP the perfect choice for your enterprise.

Twin Implementation

Twin integration involves running the new R-Wave ERP system alongside the existing system for a period of time. This parallel operation allows users to familiarize with the new system while still relying on the old one.

What is the best practice? Create a timeline for the parallel run

Clone Implementation

Clone integration refers to creating an exact copy of the current system's data and processes in the new R-Wave ERP system. This approach minimizes the risk of data loss and ensures that all historical data is preserved.

What is the best practice? Test the clone before going live

Migration Implementation

Migration is the process of transferring data from the old system to the new R-Wave ERP. This method is often used when a complete switch from the old system to the new one is necessary.

What is the best practice? Make switch during low-activity periods

Big Bang Implementation

Big Bang implementation involves switching from the old ERP system to the new R-Wave ERP system in one go. This approach is suitable for organizations that can afford a short downtime and want to avoid the complexity of running two systems concurrently.

What is the best practice? Train the staff before the switch

Hybrid Implementation

Hybrid implementation is a combination of waterfall and agile methodology, that is a combination of clone and twin where each phase must be completed before the next begins and going live in a structured way.

What is the best practice? Tailor the approach by company needs

The R-Wave Adoption

Twin integration and parallel use with phasing of module by module and then make a switch when the new ERP System is operational and the staff is ready for a soft switch to the new system in part or fully.

What is the best practice? Modules implementation plan
